

CLEANING AND CARE

VINYL ROLLS

CLEANING AND CARE INSTRUCTIONS

Remove all large or abrasive debris from material surface prior to cleaning. Use a soft bristled broom or a microfiber mop to remove loose dirt and dust. To remove stuck on soil, apply a diluted pH neutral detergent solution to surface and clean with mop or absorbent towel. Rinse thoroughly with clean water to avoid detergent residue. For tougher jobs, use auto-scrubbing equipment periodically with higher pH cleaning solutions. Spot clean all stains immediately with a clean cloth and a cleaning detergent solution (**DO NOT** use solvents as they may cause damage). Allow surface to dry before any foot traffic.

MATERIAL DISINFECTING

DISINFECTING INSTRUCTIONS

Before beginning disinfecting procedure, be sure to conduct Material Cleaning and Care procedure first. Allow material surface to fully dry. To begin disinfecting procedure, apply an EPA approved disinfectant (LYSOL Brand I.C. Quaternary Disinfectant is recommended). Dilute 1/2 oz of LYSOL Brand I.C. Quaternary Disinfectant per gallon of water. Thoroughly apply solution to material surface using a sponge, cloth, or spray. Allow solution to sit for a minimum of 10 minutes before rinsing or air drying. Wet vacuum any remaining wet areas.
